The invention relates to a human GPCR (G protein coupled receptor) designated R-14 (ADF29105), nucleic acids encoding it (ADF29104), and R-14 peptide antagonists (ADF29106-ADF29108). The invention also encompasses vectors and host cells comprising R-14 nucleic acids, and methods of screening for R-14 antagonists. The R-14 receptor is expressed in trabecular meshwork tissue, and is associated with a role in ocular outflow. Inhibition of the receptor results in a reduction of basal intracocular pressure, making the R-14 receptor a useful target for screening for ocular hypotensive drugs. The R-14 peptide antagonists are

                                                                                                                                                                                                                                                                                                                             The invention relates to a non-human mammal that carries a DNA integrated with a foreign HI7T213 or its mutant gene, or a part of it. The non-human animal is particularly a rat. Such gene shows phenotypes of e.g. cataract onset, transient skin rash and proliferation-promoting activity. The foreign HI7T213 gene is a gene that encodes a G protein-coupled receptor (GPCR) protein HI7T213. The protein, its encoded DNA and constructed transgenic animals are useful for clarifying pathological mechanism, developing therapeutic methods and screening preventives or remedies for related diseases e.g. cataract, cancer, and dermatitis. The present sequence represents a DNA encoding a human HI7T213 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               HI7T213 protein, encoded DNA and transgenic animals for clarifying pathological mechanism, developing therapeutic methods and screening preventives or remedies for related diseases e.g. cataract, cancer, dermatitis.

These proteins are involved in signal transduction pathways in many cases. The protein contains seven transmembrane domains, and is expressed in human testis, mammary gland and salivary gland tissue. The gene, its protein, agonists, antagonists and antibodies can be used to diagnose and treat diseases associated with the inappropriate expression of recording for drugs which can be used in the same manner, and for elucidating the function of the protein

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Score

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  88
